DETAILED ACTION

REASONS FOR ALLOWANCE

1. Claims 3-4, and 8 are allowed over the prior art of record.
2. The following is an examiner's statement of reasons for allowance:

The applicant's Remarks, filed on 04/07/2008, have been carefully reviewed with update search. Consequently, reasons for allowance of claims 3-4, and 8 are set forth in the following.

Regarding claim 3, the prior art made of record fails to clearly teach or fairly suggest the feature of a radio communication system include measurement means, and communications path selection means for selecting at least any one of the first communications path and the second communications paths as a communications path to be used for communications with the radio communications apparatus, based on the measured values of the power and the delay time and notifying the radio communications apparatus of the selected communications path; wherein the communications path selection means determines, for each of the first communications path and the second communications paths, a function value of an evaluation function with the measured values of the power and the delay time as arguments, and selects at least any one among the first communications path and the second communications paths as a communications path to be used for communications with the radio communications apparatus, based on the result of comparison of the function values, in combination with other limitations as specified in the independent claim 3.

Regarding claim 4, the prior art made of record fails to clearly teach or fairly suggest the feature of a radio communication system include measurement means, and communications path selection means for selecting at least any one of the first communications path and the second communications paths as a communications path to be used for communications with the radio communications apparatus, based on the measured values of the power and the delay time and notifying the radio communications apparatus of the selected communications path; wherein the communications path selection means excludes, when tolerance values are set for the power and the delay time in advance, such a communications path that at least one of the power and the delay time thereof exceeds the tolerance value, in combination with other limitations as specified in the independent claim 4.

Regarding claim 8, the prior art made of record fails to clearly teach or fairly suggest the feature of a radio communication system includes communications path selection means for selecting at least any one of the first communications path and the second communications paths as a communications path to be used for communications with the radio communications apparatus, based on the measured values of the power and the delay time and notifying the radio communications apparatus of the selected communications path, and a base station and radio network controller equipment for controlling the base station; the other radio communications apparatuses in the ad-hoc network include a first ad-hoc terminal capable of wirelessly communicating with the base station and a second ad-hoc terminal capable of communicating with the radio network controller equipment via a wired communications

network; and the second communications paths include a communications path for connecting the radio communications apparatus and the base station via the first ad-hoc terminal and a communications path for connecting the radio communications apparatus and the radio network controller equipment via the second ad-hoc terminal, in combination with other limitations as specified in the independent claim 8.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
